

C5 Diff Cooler Fitting

Use 2(two) Parker part number **10M20F80MX** from Fluidair

This is a 20mm male to insert into the diff drain/fill, and a -10an outlet. You will likely also need a reducer from -10 to -8 or -6, but those are readily available from any racing parts shop
Like <http://www.anplumbing.com/>

photo shows above part attached to SS AN line. I usually route it THROUGH the motor mount, which protects from header heat.

**The Transmission is a standard 1/2npt, which is also readily available at any race shop or anplumbing above
